

### American Tug 49

American Tug's newest model is designed for a cruising couple who sometimes host family and friends. As a result, the design places a greater emphasis on the common living area, which uses large windows to bring air and light into the spacious saloon and enlarged galley, as well as the generously proportioned wheelhouse. Extra space was also devoted to the cockpit, which is well suited to fishing and other recreational pursuits.

Like other American Tug models, the 49 rides on a semi-displacement hull that blends the potential for economical operation with the ability to confront rough weather and run at higher speeds when the need arises.

The boat is offered with an impressive list of standard features that includes full electronics, a generator, central air-conditioning and heat, an oil-change system, an integrated hydraulic system that powers bow and stern thrusters, a deck crane, and an anchor windlass. With an 800-gallon fuel capacity, it has a projected range in excess of 2,000 miles at a cruising speed of eight knots.
